

# CLIMATE RESILIENCE (CRES)

---

## **CRES3000** TOPICS IN CLIMATE CHANGE AND URBAN RESILIENCE

This course offers an interdisciplinary study of climate change and urban resilience. Case studies provide students with real-world examples of environmental adaptation and equitable resilience strategies. Topics vary and include local, global, and policy-oriented themes drawn from a range of disciplinary perspectives, including history, political science, urban studies, sociology, and economics. (4 credits) fall

## **CRES5000** SENIOR PROJECT

This course provides the opportunity for students to research, design, and implement interdisciplinary solutions to problems or scenarios related to urban climate resilience. Topics are chosen in consultation with the instructor. Projects are carried out in teams. Students are responsible for individual as well as group contributions. (4 credits) summer
